Brunch & Learn

Because it's too early for lunch

Setting up Python for Machine Learning

Stayed up all night working on that title, huh?

Here's where we want to be

...and where we'll get today, I hope

And today's tools

Python – because it's not C++

Jupyter Notebook – because it's (sort of) easy

...and the unappreciated office workers of Python data science...

Pandas – because real world data sucks

Numpy – to make number crunching go fast

Matplotlib – graphs, and more graphs...
